**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 5 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 5 and 7, line 3, it is unclear how to interpret “.. surface of the latter..”.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by the JP publication (2000-056045) [submitted by Applicant].

The JP publication (2000-056045) in figures 1-9 discloses an electronic movement which is formed by a printed circuit board 13 electrically connecting at least one electronic circuit, a digital display cell 16 and a communication antenna 20 formed by a coil having at least one turn, the coil having two ends, wherein the display cell disposed above the board 13, and wherein the coil is disposed at the side of the upper surface of the display cell (see abstract), the two ends of the coil being electrically connected to the board by means of two connection means 20a,20b which form two corresponding male connectors and two female connectors (see figure 7), wherein the two connection means are mounted on a support 13a which has two

electrical contact regions (at 21) connected respectively to these two means (see figure 7), the two ends of the coil being electrically connected to these two regions (at 21, see figure 7), and wherein the two female connectors are formed by two metallised holes (pcb 13 inherently has conductive holes in order to provide RF signals to the antenna via connection means 20a,20b) which are provided in the board.

#### **Allowable Subject Matter**

4. Claims 2-3 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 5 and 7 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The claims are allowable over the art of record because the prior art does not teach the two male connectors are formed respectively by two elastically deformable blades (claim 2); and the two connection means extending to the periphery of the display cell perpendicularly to the upper surface of the latter (claim 5).

#### **Conclusion**

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Ganter et al, Kurcbart ('325), Fujisawa et al., Kurcbart ('614), Itakura

et al., and Paratte et al. are cited as of interested and illustrated a similar structure to a timepiece antenna device.
